## Conservation of Mass: Chemical Reactions

Use the table below to construct ball and stick models. Draw a 2-D version of the model you built and count the number of bonds, and atoms.

| Compound | Formula | 2-D Drawing | Total \# of <br> atoms | Total number <br> of bonds |
| :--- | :--- | :--- | :--- | :--- |
| Water | $\mathrm{H}_{2} \mathrm{O}$ |  |  |  |
| Oxygen <br> 2 springs | $0_{2}$ |  |  |  |
| Methane | $\mathrm{CH}_{4}$ |  |  |  |
| Carbon Dioxide | $\mathrm{CO}_{2}$ |  |  |  |
| 4 springs |  |  |  |  |
| Ammonia | $\mathrm{NH}_{3}$ |  |  |  |
|  |  |  |  |  |

| Methanol | $\mathrm{CH}_{3} \mathrm{OH}$ |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Urea <br> 2 springs | $\mathrm{NH}_{2} \mathrm{CONH}_{2}$ |  |  |  |
| Amino acid | $\mathrm{NH}_{2} \mathrm{C}_{2} \mathrm{H}_{2} \mathrm{OOH}$ |  |  |  |
| 2 springs |  |  |  |  |

Use the molecules from the table above to help you solve the following chemical reactions. Draw the chemical and name the missing chemical. Think about whether any atoms have been lost or gained in each reaction. Start by creating ball and stick molecules and use your models to predict and name the finishing molecules.

| 2 water +1 Carbon dioxide | $\rightarrow$ | Methane $+2 \mathrm{O}_{2}$ |
| :--- | :--- | :--- |
|  |  |  |
| Ethane + Water | $\rightarrow$ | $?+$ Hydrogen Gas |
|  |  |  |

| 2 ammonia + carbon dioxide | $\rightarrow$ | water + ? |
| :--- | :--- | :--- |
|  |  |  |
| Methane + water | $\rightarrow$ | Hydrogen gas $\quad+\quad ?$ |
| Build your own reaction and write down your chemical equation |  |  |
